New HEI-WAY Plant in Bensalem, PA!

To further support our growing business in Eastern PA and NJ, HEI-WAY is expanding its Bensalem PA operation. We have now moved to a larger space (at the same location) and will produce HEI-WAY Premium Asphalt on-site this fall.

Site of new production facility in Bensalem, PA

Currently, HEI-WAY already serves many customers from Bucks and Montgomery Counties and NJ from this location. Since 2015 HEI-WAY has been operating year-round at Bensalem, stockpiling HEI-WAY Premium in bulk and in 50lb bags. By producing material on-site HEI-WAY hopes to provide more customers with the best asphalt repair material available!

HEI-WAY Bensalem is located at Penn-Jersey Diesel & Trailer, 2950 State Road, Bensalem PA

Not Your Typical Cold Patch!

Before

During

After

Customers in Eastern PA and Ohio have been discovering what Western PA customers have known for years. HEI-WAY high-performance material can be used for more than just filling pot holes. The following are a few examples of how HEI-WAY material has helped.

A small borough in Montgomery County PA - This residential street had a very large area where the asphalt had broken and raveled and was reduced to gravel. The plan was to pay a paving contractor to cut out the spot and repave it with hot mix asphalt. But the contractor was slow in getting to this small job and, meanwhile, residents were unhappy. HEI-WAY material provided a low-cost solution that this small Borough crew could do themselves. It has been four months since the repair was completed and it looks great. We expect it to last for years!

Montgomery County Roads & Bridges

Ridge Pike Repair in Conshohocken, PA

This county road department has been using HEI-WAY high-performance material for more than just their pot hole repairs. Ridge Pike in Conshohocken PA is an extremely busy roadway in need of repaving. While there were pot holes, there were also low spots making for a bumpy ride. The road department wanted a quick fix to make the road good enough until repaving in the future. Heavy trucks have been traveling over the repairs for 6 months, and HEI-WAY is holding strong even though the repaired areas were not cut out and there is no edge to help hold the material in place.

Schuylkill River Trail Repair

The Schuylkill River Trail is a beloved hiking and biking trail from Philadelphia heading northwest. The lower section is 30 miles long and runs from Philadelphia to Parkerford. In Conshohocken, the trail was in need of repair in an area where old railroad tracks had crossed the trail. Montco Roads & Bridges opted to use HEI-WAY material for the repairs which eliminated the need to calculate the exact amount of hot mix and having to place it before it cooled. The repairs look great and the trail is now smooth for bikers!

Bryn Athyn Church School

At the entrance to the Bryn Athyn Church School in Montgomery County PA, there was rut caused by school buses turning into the driveway each day and cutting the corner a little bit close. As a test, HEI-WAY sales representative Ken Austin filled this depression with HEI-WAY Premium, doing no preparation of the area. Cold mix was placed directly on the dirt (not recommended!). This repair was done on October 8th of 2016. After 1 year, the material is still holding strong despite being run over by school buses on a regular basis!

One Year Later

HEI-WAY Consistent quality for over 60 years!

Franklin Township, Portage County Ohio

Jake Blitz, Road Superintendent of Franklin Township, was challenged with repairing a stretch of roadway that was significantly damaged requiring signs to warn drivers to “travel at your own risk”.

Due to the severe base deterioration and drainage issues, only two options were available to complete the project. Either perform a complete milling of the road and install better drainage (which would result in significant investment) or find a different type of material to do the job. This product would need to remain flexible over time (in order to ensure no cracking due to deteriorated base) and be proven to perform well in wet conditions.

Road after patching

A simple product demonstration convinced Mr. Blitz that HEI-WAY’s high-performance material was the product that would help to resolve his project challenges. Initially, Mr. Blitz intended to use HEI-WAY material for patching purposes however, once he observed how well it performed, he inquired about the material’s paving capabilities.

Mr. Blitz was convinced that paving with HEI-WAY material, utilizing a drag box, would be the most efficient and cost effective way to complete the revitalization of these roadways, saving the Township over \$500,000 from their original estimates. With a crew of four (approximately a crew of 10 would be required to pave with hot mix), Mr. Blitz and his team were able to complete all road base repair and paving in a few short weeks. Thanks to the hard work of the Franklin Township road crew, the Brady Lake Village roadways are now safe for motorists to drive on and accessible for winter maintenance. There is no need for the “travel at your own risk” signs anymore!!
